## **DETAILED ACTION**

### ***Specification***

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant discloses at page 4, lines 9-10 that the hydrotreated distillates include Magnesium lauryl sulfate. However, Magnesium lauryl sulfate is not a hydrotreated distillate. While the examiner recognizes the Applicant may be his or her own lexicographer, a term in the specification or claims may not be given a meaning contrary to the usual meaning of that term. The terms "hydrotreated distillates" in the claims is used to mean magnesium lauryl sulfate, while the accepted meaning is petroleum distillates that have been processed by a hydrotreating process. Magnesium lauryl

sulfate is a surfactant, foaming, wetting and emulsifying agent. It is prepared by the sulfonation of lauryl alcohol and interaction with a magnesium salt.

Also, applicant discloses the terms petroleum amines. However, there is no example showing which compounds fall under this category.

4. Applicant and the assignee of this application are required under 37 CFR 1.105 to provide the following information that the examiner has determined is reasonably necessary to the examination of this application.

The information is required to complete the background description in the disclosure by documenting that magnesium lauryl sulfate is a hydrotreated distillate and to show compounds that fall under the category of petroleum amines.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the term "predetermined" is indefinite.

In claims 2 and 17-20, it is not clear what constitutes "petroleum amines".

Clarification and/or correction are required.

In claims 3 and 4 it is not clear if the aromatic hydrocarbon is different from or included in the hydrocarbon mixture of claim 1.
